MCREATIK STUDIOS · PRODUCT OVERVIEW

McreatiK Instant Memories

Every photo, on every guest's phone, while the event is still happening.

A live event gallery for professional photographers. Photos go from the camera to a gallery that guests open by scanning a QR code. No app, no login, no waiting weeks.

Camera • Laptop • Cloud • Guests' phones

PROVEN AT A REAL WEDDING & RECEPTION

2,132	2	0	Seconds
photos delivered live	professional cameras	photos failed	from shutter to guests

WHY IT MATTERS

Guests want the photos *now*, not three weeks later.

At a wedding, hundreds of guests watch the photographer work but never see a single photo on the day. So they take blurry phone pictures instead, and the studio's best work arrives long after the excitement has passed.

Today

- Guests wait days or weeks for photos
- Phone snaps of the stage get shared, not the professional shots
- The studio's name is invisible to the guests on the day
- Photos are shared by hand through WhatsApp and drives

With Instant Memories

- Photos appear on guests' phones within seconds
- Guests save and share the professional shots on the day
- The studio's work is in front of every guest, live
- One QR code, so there's nothing to send manually

What it means for a photography studio

✨

A premium "wow" moment

The couple and families see the work live. It's a visible difference from other studios.

📣

Brand reach at every event

Hundreds of guests at one event see the studio's photos and name: future couples among them.

💼

A new add-on to sell

A live gallery can be offered as an upgrade on top of existing wedding packages.

HOW IT WORKS

From shutter to guests' phones in four automatic steps.

The photographer shoots exactly as usual. Everything after the shutter press happens on its own.

1

📷 Camera sends

The camera sends each JPEG over Wi-Fi to the laptop as soon as it's taken, using its built-in FTP transfer. RAW files stay on the card.

2

💻 Laptop prepares

The McreatiK Uploader app straightens, resizes and optimises each photo on the laptop, making a sharp web version and a thumbnail.

3

☁️ Cloud publishes

Only the light web versions (about 0.6 MB) go to the cloud. They're then served to guests through a global delivery network.

4

📱 Guests see it

The gallery on each guest's phone updates by itself. New photos appear at the top, with no refresh needed.

~ seconds

Typical time from shutter press to the photo on a guest's phone, even over a mobile hotspot at the venue. Preparing photos on the laptop is what makes this fast: guests never wait for 10 MB originals to upload.

What the photographer needs at the venue

EQUIPMENT	ROLE
Camera with Wi-Fi FTP transfer	Sends photos automatically. Tested with the Canon EOS R6 Mark II, and supports other cameras with FTP transfer. Any camera software that saves into a folder also works.
Laptop	Runs the McreatiK Uploader. Multiple cameras can be connected to one event.
Mobile hotspot or venue Wi-Fi	Links the camera to the laptop and carries the upload. About 0.6 MB per photo, so 1,000 photos use roughly 0.6 GB.
Printed QR code	Placed at the entrance, stage and tables. Guests scan it to open the gallery.

THE WORKFLOW

Before, during and after the event.

A simple routine the studio's team can follow at every event.

Before

Day before · about 15 min

1. Create the event in the dashboard: name, date and gallery address.
2. Add one uploader per camera. Each gets its own secure connection code.
3. Download or print the guest QR poster. Share the gallery link with the family in advance.

Setup

At the venue · about 15 min

1. Turn on the hotspot and connect the laptop and camera to it.
2. Open the McreatiK Uploader. It shows "Online" and "Camera connected".
3. Take a few test shots, confirm they appear on a phone, then set the event to **Live**.
4. Place the QR posters where guests gather.

During

The whole event

1. Shoot as normal. Photos flow to the gallery automatically.
2. Check live numbers in the dashboard: photos received, in the gallery, any issues.
3. Remove any unflattering shot with one click. It disappears from every phone within seconds.
4. If the internet drops, photos wait safely on the laptop and upload by themselves once it returns.

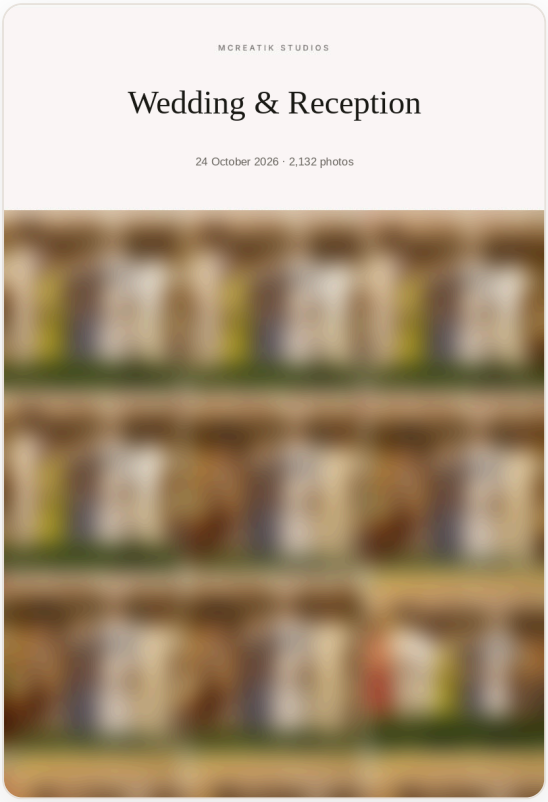

After

Same day

1. Set the event to **Completed**. Guests can keep viewing and downloading.
2. Full-resolution originals and RAWs stay with the studio for editing and albums.
3. Set an automatic delete date, archive the gallery, or keep it as long as the studio wants.

THE GUEST EXPERIENCE

Scan. Watch. Save.

The live gallery on a guest's phone at the real event. Couple's names and photos blurred for privacy.

Guests open the gallery by scanning the QR code with their phone camera. It opens in the browser straight away. There's nothing to install and no account to create.

- **Live updates:** new photos appear at the top automatically while the page is open.
- **Full-screen viewing:** tap any photo and swipe through the event.
- **Save to phone:** one tap downloads the photo. Android saves straight to the gallery, and iPhone opens "Save Image".
- **Sharp and fast:** photos are served at 2048 px, sharp on any phone screen and quick to load on mobile data.
- **Elegant, branded page:** event name, date and photo count in a clean, wedding-appropriate design.
- **Works for everyone:** any modern Android or iPhone, from grandparents to teenagers.

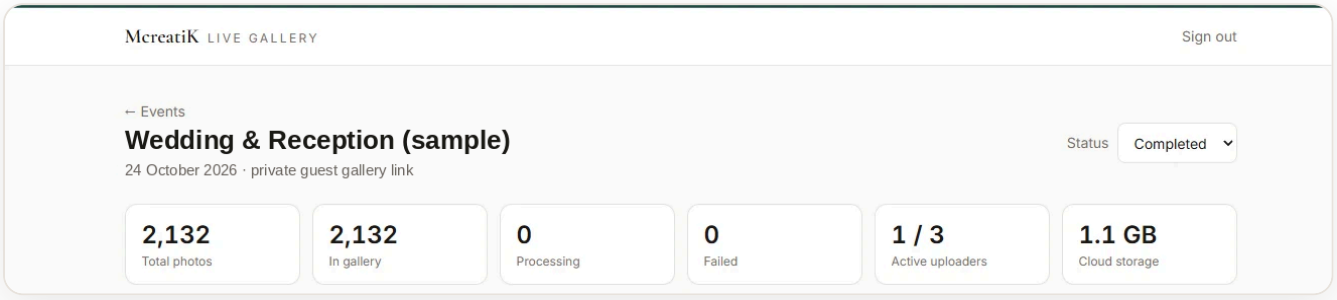

Private by design

Only people who scan the QR code or receive the link can open the gallery. Draft events stay hidden, and archived galleries close for good.

THE STUDIO DASHBOARD

Full control of every event.

A web dashboard for the studio to set up events, connect cameras and curate the gallery in real time.

Live statistics from the real event: 2,132 photos received, 2,132 in the gallery, 0 failed.

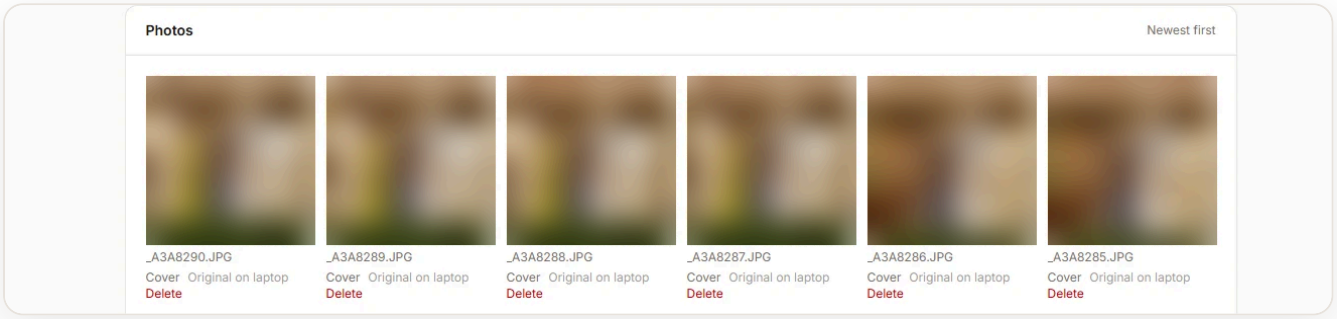

Photo management: choose the cover photo or delete a photo in one click. Photos blurred for privacy.

Events

- Create an event in a minute
- Draft → Upcoming → Live → Completed → Archived
- Custom gallery address

Cameras

- One uploader per camera
- Online/offline status per camera
- Revoke or replace a code instantly

Guests & curation

- QR as PNG, SVG or print-ready poster
- Delete photos live, set the cover photo
- Automatic delete date

TECHNOLOGY & RELIABILITY

Built on proven, professional tools.

Each part runs on established infrastructure used by businesses worldwide. All traffic is encrypted (HTTPS).

LAYER	TOOL	WHAT IT DOES
Camera transfer	Built-in Wi-Fi FTP of professional cameras	Sends each photo the moment it's taken, with no cables or extra software.
Laptop app	McreatiK Uploader (our own software)	Receives photos, prepares web-ready versions, uploads reliably and queues photos if the internet drops.
Photo storage & delivery	Cloudflare global network	Stores the gallery photos and serves them quickly to phones across India and abroad.
Gallery & dashboard	Cloudflare-hosted web app	The guest gallery and studio dashboard. Fast and mobile-first.
Application server	Secure cloud server (Oracle Cloud, India region)	Runs the live gallery engine: events, uploads and real-time updates to guests.
Database	Supabase (managed PostgreSQL, Mumbai)	Securely stores events, photo records and settings.

Designed so that no photo is ever lost

Three copies

Every photo is on the camera card, on the laptop and in the cloud. Originals never leave the studio's control.

Works through bad networks

If the venue internet or camera Wi-Fi drops, photos wait and upload automatically when the connection returns.

No duplicates

Each photo is fingerprinted, so a re-sent photo never appears twice in the gallery.

Secure camera access

Each camera uses its own connection code, which the studio can revoke at any moment.

PROVEN AT A REAL EVENT

Wedding & Reception · October 2026

Instant Memories ran across a full wedding and reception, with two professional photographers (traditional and candid) shooting at the same time.

2,132	2	0	1.1 GB
photos delivered live to guests	cameras, traditional + candid	failed photos in the gallery	total cloud storage for the event

What worked

- Every photo from both cameras reached the gallery
- Photos appeared on phones within seconds of the shutter
- Ran over a mobile hotspot, with no venue internet needed
- No change to how the photographers shoot

Event setup

- Canon EOS R6 Mark II cameras over Wi-Fi FTP
- One laptop running McreatiK Uploader
- Guests joined by scanning the QR code
- Originals kept by the studio for editing and albums

NEXT STEPS

Let's discuss how this fits your studio.

1. Live demo
A walkthrough of the gallery, dashboard and camera setup.

2. Pilot events
Run Instant Memories at a few of your upcoming events.

3. Partnership model
Branding, scale, support and commercial terms.
